OBJECTIVE

Fourth-year Information Technology student seeking an OJT/Internship or Entry-Level (Junior) Web Developer role. Hands-on experience building full-stack web applications with React, TypeScript, Firebase and Supabase, leading a CNN-based facility management system project, and using AI coding tools to accelerate development. Brings strong communication skills from three years of organizational leadership.

EDUCATION

BS in Information Technology — Universidad de Manila

2023 – Expected 2027

Currently 4th Year

Senior High School, ICT Strand — Universidad de Manila

2021 – 2023

With High Honors, Grade 11 and Grade 12

TECHNICAL SKILLS

- Languages: Java, Python, PHP, JavaScript, TypeScript, GDScript
- Game Development: Godot Engine, GDScript, 2D Game Asset Design
- Frontend: React, Vite, Tailwind CSS, shadcn-ui
- Backend & Database: Supabase (PostgreSQL, RLS), Firebase (Firestore, Auth, Storage), Django, MySQL
- Security: Row-Level Security (RLS), Firestore Security Rules, database access-control policies, bcrypt password/passkey hashing
- Tools & Practices: Git/GitHub, AI-assisted development (AI coding agents), REST APIs, Responsive Web Design
- Core CS Fundamentals: Object-Oriented Programming, Data Structures & Algorithms

PROJECTS

NurseVault — Digital Records Archival System, PLM College of Nursing

Sept 2026 – Present

Commissioned Developer (Client Capstone Project)

- Built a records-archival system for digitizing and managing sensitive student records, using React, TypeScript, TanStack Start, Tailwind CSS, and Supabase (PostgreSQL + Auth)
- Engineered database-level security for archived student data: Row-Level Security (RLS) policies, full audit logging of every record action, and per-file passkey protection with bcrypt-style hashing (pgcrypto)
- Applied column-level database grants to restrict sensitive fields (file paths, passkey hashes) from client access, enforcing access control at the database layer rather than the UI alone
- Built the searchable, filterable records browser with a batch → category → status folder hierarchy for the College's archival office

Inuman Log — Social Networking Web App

Sept 2026 – Present

Sole Developer (Practical Project in Platform Technologies)

- Built a full-stack social networking platform (feed, profiles, direct messaging) using vanilla JavaScript and Firebase (Firestore, Auth, Storage), hosted on an Azure VM via IIS
- Designed granular Firestore Security Rules for per-collection access control, including a server-verified mutual-follow gate that must pass before two users can open a direct-message conversation
- Implemented a follow/unfollow system using atomic batched writes to keep both users' follower and following lists consistent
- Built real-time direct messaging, a photo feed with comments and reactions, and username-uniqueness enforcement

Fac-Check — Facility Concern Reporting & Corrective Maintenance Management System Jun 2026 – Present

Lead Developer (Thesis/Capstone Project)

- Leading development of a facility-maintenance reporting system for Universidad de Manila, Maintenance Engineering Division (MED) that uses Convolutional Neural Networks (CNN) to detect and classify facility concerns
- Developed the system's end-to-end concern lifecycle — from user submission and notifications to admin tracking, monitoring, and resolution management

SDLC Strike — 2D Mobile Game-Based Learning Tool for SDLC Education

May 2026

Programmer & Game Developer (Capstone Project, Team of 4, 3rd Year College)

- Co-developed a Godot Engine (GDScript) educational RPG that gamifies six Software Development Life Cycle models (Waterfall, Incremental, Iterative, Agile, V-Model, Spiral) through boss battles and quiz-based assessments
- Built core game systems as one of two programmers, including a persistent save/progress state manager, scoring and local leaderboard system, and quiz-based combat mechanics across 2,800+ lines of GDScript and 55 scenes
- Co-created all game assets from scratch (sprites, UI, audio) and exported the final build as a standalone Android APK
- Presented and successfully defended the project to the College of Computing Studies, Universidad de Manila (May 22, 2026)

CARAS Organization Management System (carasdesansebastian.vercel.app) *Nov 2025 – Present*

Sole Developer

- Evolved a static organization website into a full admin dashboard system with two-tier, role-based authentication (Admin and Treasurer), each with a dynamically-rendered navigation and permission set
- Built a Finance module (donations, expenses, contributions, penalties) with trend charts, export previews, and print-ready reports for the Treasurer's account
- Integrated an AI-assisted financial reporting feature: a Supabase Edge Function sends pre-computed data digests to an AI model, which drafts narrative treasurer's reports for review before finalization
- Enforced Row-Level Security policies and a server-side admin-verification function across all data tables (Events, Gallery, Applications, Members), with session auto-logout on inactivity

UDM-OrgCentral — Organization Management System *3rd Year (2025)*

Sole Developer

- Independently designed and developed a web-based management system for Universidad De Manila organizations using React and Vite

SEMINARS & TRAININGS ATTENDED

UID 101 / UID 107: Workplace Preparation Seminar *August 6, 2026*

Universidad de Manila

- Resource Speaker: Mr. Iserlohn Peter M. Lim

Innovative Leadership: Creativity Initiative and Problem-Solving *February 25, 2026*

Universidad de Manila

- Guest Speakers: Lord Edgardian J. Tavu, Chester Bryan B. Torres, Jobert D. Bravo, Dr. Arlene Valderama

LEADERSHIP & INVOLVEMENT

Media Relations Officer — CARAS (Confraternity of Augustinian Recollect Altar Server) 2024 – Present

- Manage organization communications and media presence across 3 years of active membership

Scholar — Youth Servant Leader Education Program (YSLEP), San Sebastian Basilica Parish 2023 – Present

- Selected as a youth leadership scholar, maintaining the program's standing from 1st year college to present
